24 September 2015

To our valued customers,

In response to recent customer inquiries, this bulletin intends to clarify the gold thickness on Positronic items that carry '-14', 'C1' or 'C2' plating suffixes. The '-14' plating specification, as it is internally referenced, calls for 30 microinches of gold (minimum) over 50 microinches of nickel (50 target, 30 minimum). In future catalog revisions, this clarification will be made. Please direct any further questions to a local Positronic sales representative found at www.connectpositronic.com/locations. Thank you for your valued business.

Cordially,

Jay Sandidge

International Marketing Director, Positronic
